See below – I think maybe IDEM doesn't use Microsoft for their email, so that is the issue.

Hi, Val,

I do see that an invitation was sent to her today:

However, when I went to www.live.com to confirm that Mary has a Microsoft ID, I entered her idem email address and it said that there is no account with that email address.

So she'll need to register for that first (using her idem email address). She can do it from www.live.com or from the East Chicago invitation she received.

Does that help?

Janice

I know you are swamped with the Move, but in case you check your email – can you help with this issue with giving Sharepoint access to IDEM?

Any ideas why Mary can't sign on?

Rita,

I cannot sign into the East Chicago site using my State email. I can't use my personal email because access was only granted to my State email.

We can definitely cover your questions during the call. Miguel prepared graphs of the data that we also wanted to share.

Hi Rita,

In case you want to send this to Mary, attached is an updated file with two more sites I added this morning (3097 & 3437). Each graph has the service line material and internal plumbing material in the heading separated by a slash, so (Pb/G) means the service line coming into the home is lead and the interior (premise) plumbing is galvanized iron. We have no information on what the public side of the service line (water main to property line) is made of for any home. If there are question marks on either side it is because I do not have the information.

Thank you for the information. It would be helpful if the headings were explained. Another item we noticed on the sampling spreadsheet, the plumbing material was not identified, could you please explain why no identification of this material was made? Also, which homes of the ones sampled have lead service lines? Some of these sample were collected before IDEM requested that East Chicago increase their orthophosphate. Our request was on 10/26. We are working with East Chicago and tracking the increase of Orthophosphate residual in the distribution system. They are increasing Orthophosphate feed to 1 ppm leaving the plant. Their target residuals in distribution system is now 0.75 to 1 ppm.

Attached are the residuals from August thru October distribution samples for Orthophosphate. You will notice the levels are low; that's why we asked for the increase.

Please keep me as the main point of contact so I may brief the Commissioner instead of her hearing from outside our agency. We just

received the info yesterday afternoon and we were going to discuss and let the Commissioner know but that was taken out of our hands.

Indiana takes this information very seriously and we will work with EPA and East Chicago to assure that all residents have drinking water that meets the Federal standards.

Much Appreciated

Attached is a spreadsheet summarizing the data collected to date in East Chicago. My apologies for the delay. Tomorrow we can talk more about getting you actual lab reports or data in other formats.

In addition, Dean Maraldo summarized the data and I am sharing it below.

Subject: USS Lead Data Summary

All: here's a quick summary of results for USS Lead sequential sampling. Note that we still have no validated data for Zone 3 properties. New schedule from Superfund has first validated results for Zone 3 coming in on Dec. 9, with additional sets due Dec. 16 and Dec. 23.

So far, 54% of properties sampled, pre-excavation, have at least one sample with lead above action level [66% for Zone 3 and 25% for Zone 2].

We do have validated data for Zone 2 which confirmed the reliability of preliminary data. This applies to Zone 2 only as different labs were used for Zone 3.

USS Lead Sequential Sampling Result Summary

11/30/2016 Draft

Zone 2 Zone 3 Total

	Pre	Post	Pre	Post	Pre	Post
# of Properties in Sequential Sampling Program	8	8	37	37	45	45
# of Properties with Preliminary Results	8	5	18	16	26	21
# of Properties with at least one Pb result above action level (15 ppb)	2	1	12	8	14	9
# of Properties with Final - Validated Results	7	1	0	0	7	1
